Program
B.Tech, CSE

Yash Yadav

CSE student, aspiring full-stack developer

Name: Yadav Yash Jayprakash | Enrollment no. 202506101410003

About me

I build responsive websites and small full-stack systems. My strongest work so far connects a React front end to a PHP and MySQL back end, and I like finishing things end to end: planning the pages, wiring the data, then testing it like a real visitor would.

Projects

Lord's Gym: website and member portal

React · Tailwind CSS · PHP · MySQL

- Built a website for a gym in Sachin, Surat with three membership plans and an enquiry form that saves each lead to a MySQL table.
- Wrote PHP endpoints for login, enquiries and dashboards; passwords are checked against bcrypt hashes and the user role (admin or member) decides which screen opens.
- Member dashboard shows the active plan and days left; the admin pipeline lists enquiries and filters them by status: New, Contacted, Converted or Dropped.

github.com/YadavYashJ/lords-gym-website

La Bella Cucina: menu and ordering page

HTML · CSS · JavaScript

- Created a restaurant menu with six category tabs (starters, pasta, pizza, mains, desserts, drinks) and vegetarian, chef's pick and new badges.
- Order panel lets guests add dishes, change quantities, remove items or clear the cart, with the subtotal, 5% tax and total updating instantly.
- Placing an order opens a confirmation pop-up; the page works on its own with no backend.

Portfolio Website

React · TypeScript · Tailwind CSS

- Designed this responsive single-page portfolio with a parallax intro, a project gallery with screenshots and a validated contact form.
- Includes a working résumé download, keyboard-friendly navigation and a layout that adapts from phone to desktop.

Education

B.Tech, Computer Science Engineering

Uka Tarsadia University, Bardoli · 2025 to 2029

Career goal

To grow into a confident full-stack developer by building more real-world projects, strengthening my React and backend skills, and working with a team on useful software.
